EDUCATION

Georgia Institute of Technology - M.S. Computer Science with AI specialization | GPA: 4.0 — Expected Dec 2028
Texas A&M University - B.S. Data Engineering & Computer Science Minor | GPA: 3.6 — Aug 2022 - May 2026

TECHNICAL SKILLS AND CERTIFICATIONS

Languages and Frameworks: Python, Java, Go, JavaScript, Spring Boot, Quarkus, Pandas, NumPy, scikit-learn, TensorFlow, PyTorch
Cloud and Tools: GCP, BigQuery, Kubernetes, Docker, Prometheus, Grafana, Git, Claude Code,,IntelliJ IDEA, Cursor, DataGrip
Certifications: Claude Code in Action, Claude Code 101, Claude 101, MySQL Cert

PROFESSIONAL EXPERIENCE

The Home Depot — Atlanta, GA
Software Engineer — Jun 2026 – Present
- Onboarded critical user journeys onto Home Depot's SLO enforcement engine by authoring journey and endpoint YAML configs and deploying them to GCP Kubernetes, delivering 99.99% availability and latency SLOs targets
- Reduced alert investigation time by 70% across 86 non-production GCP cluster alerts by rewriting alert queries and message templates via Terraform
- Retired 4 legacy feature flags and repaired 100+ tests in a Java/Quarkus service, enabling a fulfillment path initiative targeting $2.5M cost avoidance, $2M cost out, and ~1-day faster delivery

Dematic — Grand Rapids, MI
Software Development Engineer Intern — May 2024 – Jun 2026
- Increased autonomous robot storage selection accuracy by 25% by developing pallet storage logistics software for optimal container selection
- Implemented 10+ Nocobase data interfaces enabling warehouse operators to manage device control system data, reducing manual data entry time across insert, update, and delete operations

The Home Depot — Atlanta, GA
Software Engineer Intern — May 2025 – Jul 2025
- Improved P95 API response times by 90% and cut cloud costs by 50% by migrating core sourcing service from Java to Go
- Optimized system performance by reducing memory usage 35x and CPU consumption by 40% on average across load levels
- Delivered project 1 week early and presented final readout to 100+ associates including executives, managers, and engineers

Texas A&M University — College Station, TX
Undergraduate Research Assistant — Jan 2024 – May 2024
- Developed a Python script achieving 1.38% error in image distortion removal and contributed to a C++ visual odometry pipeline, improving feature tracking accuracy for autonomous navigation research

CLOUDSUFI — Houston, TX
Data Engineering Intern — Aug 2023 – Jan 2024
- Explored Google Cloud Platform data engineering services including Cloud Cortex Framework for SAP and Looker, earning certifications in Google Analytics, Looker, and machine learning

PROJECTS

Aggie AI — Live
- Built Aggie AI serving over 2,000 active users using RAG-based AI, web search functionality, and PostgreSQL to provide natural language course recommendations based on Texas A&M course GPA distributions and professor reviews
- Developed Python data pipeline with automated PDF extraction and web scraping to collect and process academic data and professor reviews, integrating results into optimized PostgreSQL database schema

Umari — Live
- A web-based ordering platform built with Next.js and Supabase that enables small food vendors to accept orders via shareable links or QR codes, processing 150+ transactions in production
- Developed full-stack SaaS architecture with real-time order management, Stripe Connect payouts, and a responsive UI using Radix UI and Framer Motion
